Revision History

Date	Reason for Revision
03/10/2026	Made the following changes: - Removed the evidence object and associated parameter for SSADMF results in section 4.2: Sample GET Result (orderId) Response and section 4.3.4: ssadmf. - Updated various parameters returned for SSADMF results in section 4.2: Sample GET Result (orderId) Response and section 4.3.4: ssadmf.
02/27/2026	Updated the values for the status parameters and removed the statusId parameter from Appendix A: Webhook for Order Status Notifications.
02/05/2026	Added Appendix C to provide sample .json for entity verification and validation results returned via the GET /results/{orderid} call.
12/08/2025	Updated the required, optional, and conditional parameters in section 1.2.1: POST Orders Parameters.
09/18/2025	Changed the externalProviderId parameter from optional to required in Section 1.2.1. POST Orders Parameters.
07/29/2025	Added License Search, License Verification, and License Profile Verification to section 1.1. Required Data Points for Monitoring by Product.
02/20/2025	/api/v{version} has been removed from the URL portion of the following endpoints: - GET /api/v{version}/orders/{orderid} to GET /orders/{orderid} - GET /api/v{version}/orders/ to GET /orders/ - GET /api/v{version}/results/{orderid} to GET /results/{orderid}
01/22/2025	Made the following changes: - Added Board Certifications to the Submit Monitoring Request for Practitioners and Facilities using the POST Orders Call. - Added boardCertifications the GET Result (orderId) Call in section 4.3.6. - Added Appendix B: Valid Values for Board Certifications.
11/14/2024	Removed capitalization in the HTTP method for all calls.

Date	Reason for Revision
07/10/2024	Updated the parameter descriptions for providerType and facilityType in Section 1.2.1. POST Orders Parameters.
05/24/2024	Added facilityName, legalBusinessName, otherFacilityName, and otherFacilityNameType to Section 4: Retrieve the Results for a Single Monitoring Order using the GET Result (orderId).
04/08/2024	Made the following changes: - Updated details in Appendix A: Webhook for Order Status Notifications. - Added DEA, NPI, and SSADMF to the response and parameters in Section 4: Retrieve the Results for a Single Monitoring Order using the GET Result (orderId) Call.
03/19/2024	Updated the response and parameters in Section 4: Retrieve the Results for a Single Monitoring Order using the GET Result (orderId) Call.
12/18/2023	Initial release.

About the Verisys Unified API – Monitoring Services

The Verisys Unified Monitoring Services API enables you to initiate monitoring for a practitioner after completing the primary source verification (PSV) process. As part of the monitoring service, any changes to the practitioner's license(s), Board Certifications (re-verify upon expiration), NPI registration, DEA registration, or inclusion on the SSADMF, Abuse Registry, Sex Offender Registry, or sanctions are identified without submitting a new PSV order via the Data Services API.

The API uses the REST protocol, providing secure endpoints for each function. The portability of these technologies allows customers to develop in whatever language or framework they choose.

The remaining sections in this guide each describe each specific operation.

Initiate Monitoring Requests

- Submit Monitoring Request for Practitioners and Facilities using the POST Orders Call.

Retrieve the Status and Results of Monitoring Requests

- Retrieve the Current Status of a Single Monitoring Order using the GET Order (orderId) Call.
- Retrieve the Status for Multiple Monitoring Orders using the GET Orders Call.
- Retrieve the Results for a Single Monitoring Order using the GET Result (orderId) Call.

Stop Monitoring Requests

- Halt the Monitoring Process using the Stop Monitoring Requests Call.

Accessing the Verisys Unified Monitoring Services APIs

To invoke the Verisys Unified Monitoring Services API, your organization must create an application client account and user accounts for each application user accessing the API. Contact your Verisys Client Services representative to have these accounts created for you.

Important: Verisys services use dynamic network IP addresses. Careful attention should be given to relying applications so their infrastructure does not store IP addresses for any length of time, or it may cause intermittent service interruptions or complete outages.

Authentication

The Verisys Unified Monitoring Services APIs uses OAuth2 for its authentication.

Direct App Client Authentication: Your application has a single set of credentials that it will use to access the API. All activities, such as creating a new verification and validation order, will be logged as being performed by your application, not the particular end user using the application at the time.

Authenticating to the API as a Direct Client Application

When authenticating the API directly, you may specify the scopes your application is requesting. If you do not specify a scope, the token retrieved will be authorized for all scopes. Typically, you will want all scopes, but you can limit this to prevent your application users from inadvertently calling certain endpoints.

The steps below outline how your application will authenticate itself and retrieve its authorization token to use on each API call.

1. Your app should make a POST request to the Token Service using its client id and app client secret as a Basic Authentication header.

2. The POST request should appear as follows:

```
POST https://[AUTHORIZATION URL]/token&
Content-Type='application/x-www-form-urlencoded'&
Authorization=Basic [Base 64 Encoded "your client_id:your client_secret"]
grant_type=client_credentials&
client_id=[your app client_id]&
```

3. If successful, the POST method will return a body containing an "access_token" parameter to the client application. The value of this parameter is the JWT token that should be put in the Authorization header for all API calls.

OAuth token Security

All communication is conducted over an HTTP/TLS 1.2+ connection. The Verisys Unified API uses an OAuth bearer token flow for authentication. All calls must include an OAuth token obtained using your Client ID. The Client ID is created by the Verisys team, and the client will be issued two different Client IDs per client and sub-client combination, one for the sandbox environment and one for production.

The Client ID allows you to generate an OAuth token. The token is obtained by making an HTTPS POST call to the <https://apis.verisys.com/auth> endpoint with the following values:

Version: 1.0

Production: <https://apis.verisys.com/auth/api/v1/auth/token>

Stage: <https://apis.verisys.com/auth-stage/api/v1/auth/token>

```
response_type = token
client_id = [id provided by Verisys team]
```

The API JSON response contains a token parameter. This token can then be used for other API operations.

Note the expires_at parameter in the response, as the token will cease to function after this time, and you will need to generate a new token to continue making calls.

Webhook Notification

Verisys Unified APIs can push notifications to a client-specified API endpoint or webhook that employs basic OAuth pattern authentication. For monitoring orders, this enables a customer to receive a notification any time one of their monitored providers has new results. Refer to [Appendix A: Webhook Notifications](#) for more information.

HTTP Response Codes

Following are the usual response codes expected with this API.

HTTP Response Codes	HTTP Methods	Resulting API Behavior
200	GET, POST, PUT, DELETE	API processing completed as expected.
201	GET, POST, PUT, DELETE	The request has succeeded and has led to the creation of a resource.
202	GET, POST, PUT, DELETE	Request in progress but not yet complete (async).
400	GET, POST, PUT, DELETE	Cannot parse request, incorrect syntax, or invalid schema.
401	GET, POST, PUT, DELETE	Authorization failure, user doesn't have access to the resource. Typically masked as an HTTP 400 response due to IRM policy.
403	GET	Authentication failure, user doesn't have access to the resource. Typically masked as an HTTP 400 response due to IRM policy.
404	GET, POST, PUT, DELETE	Resource does not exist.
500	GET, POST, PUT, DELETE	General server problem.
502	GET, POST, PUT, DELETE	Invalid response from an upstream server.
503	GET, POST, PUT, DELETE	Service is temporarily unavailable to handle request.

Error Messages

The following error messages are expected for general processing errors.

Process	Error Message	Description
General Error	"Error has occurred and your request was not completed. Please contact Verisys customer service for more information"	This is a general error message indicating something went wrong that requires Verisys customer service support.

1. Submit Monitoring Request for Practitioners and Facilities using the POST Orders Call

The POST Orders call enables you to submit new monitoring request orders.

HTTP Method: POST /orders

Stage URL: <https://apis.verisys.com/profile-orders-stage>

Production URL: <https://apis.verisys.com/profile-orders>

1.1. Required Data Points for Monitoring by Product

Product	Required Data Points (Providers)	Required Data Points (Facilities)
Abuse Registry	Billing Client ID Offering ID External Provider ID First Name Last Name SSN/DOB (Include Address, if available)	N/A

Product	Required Data Points (Providers)	Required Data Points (Facilities)
Board Certifications The specialty board certifications found/verified for providers.	Product Code Billing Client ID External Provider ID First Name Last Name Board Cert # Specialty Type Subspecialty (required if available) Certification Issuing Agency <i>Additionally, include any of the following if available:</i> SSN DOB NPI #	N/A
CMS Preclusions Providers and prescribers who are precluded from receiving payment for Medicare Advantage (MA) items and services or Part D drugs furnished or prescribed to Medicare beneficiaries.	Billing Client ID Offering ID External Provider ID NPI #	Billing Client ID Offering ID External Provider ID NPI #
DEA The DEA search is used to see if a doctor can prescribe drugs and what drugs they can prescribe.	Billing Client ID Offering ID External Provider ID First Name Last Name DEA # (Include NPI # and SSN/DOB, if available)	Billing Client ID Offering ID External Provider ID Facility Name TIN DEA # NPI #

Product	Required Data Points (Providers)	Required Data Points (Facilities)
FACIS Level 1m The recommended baseline and minimally required compliance search for candidates employed by organizations that receive any government funding for state or federal healthcare programs.	Billing Client ID Offering ID External Provider ID First Name Last Name SSN/DOB (Include NPI #, if available)	Billing Client ID Offering ID External Provider ID Facility Name Physical Address TIN (Include NPI #, if available)
FACIS Level 3 The most comprehensive search includes all federal and state-level exclusions and sanctions data. This includes data from more than 3,500 primary sources, including aggregating data from 2,500 state sources with state sanctioning boards from all 56 U.S. jurisdictions across all provider types.	Billing Client ID Offering ID External Provider ID First Name Last Name SSN/DOB (Include NPI #, if available)	Billing Client ID Offering ID External Provider ID Facility Name Physical Address TIN (Include NPI #, if available)
NPI The National Provider Identification (NPI) number is federally regulated and offers a unique number that can be used to aid in identification.	Billing Client ID Offering ID External Provider ID First Name Last Name NPI # DOB/SSN	Billing Client ID Offering ID External Provider ID Facility Name NPI TIN
OFAC Basics	Billing Client ID Offering ID External Provider ID First Name Last Name DOB (Include NPI and Address, if available)	Billing Client ID Offering ID External Provider ID Facility Name TIN (Include NPI and Address, if available)

Product	Required Data Points (Providers)	Required Data Points (Facilities)
OFAC Plus	Billing Client ID Offering ID External Provider ID First Name Last Name Address SSN/DOB	Billing Client ID Offering ID External Provider ID Facility Name TIN Address
Sex Offender Registry	Billing Client ID Offering ID External Provider ID First Name Last Name SSN/DOB (Include address, if available)	N/A
Social Security Administration Death Master File (SSADMF) The Social Security Administration (SSA) Death Master File (DMF) includes a list of Names and Social Security numbers when Belonged to the deceased.	Billing Client ID Offering ID External Provider ID First Name Last Name SSN	N/A
State License Federal and state boards and has information about who a license number belongs to and whether it is valid and active.		
License Search	Billing Client ID Offering ID External Provider ID First Name Last Name License #	Billing Client ID Offering ID External Provider ID Facility Name NPI #

Product	Required Data Points (Providers)	Required Data Points (Facilities)
License Verification	Billing Client ID Offering ID External Provider ID First Name Last Name License # License State Code Verisys License Type SSN/DOB and NPI #, if available	Billing Client ID Offering ID External Provider ID Facility Name License # License State Code Verisys License Type TIN NPI # and Address, if available
License Profile Verification	Billing Client ID Offering ID External Provider ID First Name Last Name SSN/DOB NPI # License Profession Employment State	N/A

1.2. POST Orders JSON

```

1.2.1. POST Orders Parameters

externalOrderId | string

A unique identifier used to identify or correlate the Profile order (*optional*).

productCode | integer

The product code (**offering id**) for the business rule set under which the provider should be primary source verified (*required*).

market | integer

The identifier for the market in which this provider is being credentialed (market client id) (*optional*).

billingClientId | integer

The identifier for the client submitting the Profile order (ID supplied by Verisys) (*required*).

batchDesc | string (maxLength: 80 characters)

A string identified that can be used to group multiple orders into a single batch (*optional*).

externalProviderId | string (maxLength: 20 characters)

An identifier used to identify the provider in the client's system (*required*).

include | string

An array indicating which data source(s) to include in the response. If none are specified (or empty), all data sources you subscribe to are returned (*optional*).

Configuration is based on the offering ID.

practicingStates | string

A list of all the states (2-character US Post Office abbreviation) where the provider is practicing. Depending upon product/offering configuration (as defined by ProductCode), Profile results may be limited to only those practicing states (e.g., if the provider has licenses issued by GA, TN, and AL but only GA and TN are included in practicing states, license for AL will not be returned (*optional*)).

stateLicenseState | string (maxLength: 2 characters)

The state issuing the license used to match the provider in the Verisys system (*conditional; required for License monitoring*).

stateLicenseNumber | string (maxLength: 20 characters)

The license number for the state used to match the provider in the Verisys system (*conditional; required for License monitoring*).

deaCertificateNumber | string (maxLength: 20 characters)

The DEA certificate number (used to match the provider in the Verisys system) (*conditional; required for DEA monitoring*).

npiNumber | string (maxLength: 10 characters)

The provider's National Provider Identifier (NPI) number used to match the provider in the Verisys system.

lastName | string (maxLength: 30 characters)

The provider's last name (*required for practitioners*).

firstName | string (maxLength: 30 characters)

The provider's first name (*required for practitioners*).

middleName | string (maxLength: 20 characters)

The provider's middle name (*optional*).

suffix | string (maxLength: 25 characters)

The provider's Suffix (e.g., Jr., III) (*optional*).

aliases

[...]

providerType | string (maxLength 80 characters)

The type of healthcare provider (i.e., MD, DO, etc.) (*required for License and NPDB verifications*). The license type should be instead of the provider type for license monitoring.

dateOfBirth | string

The provider's date of birth (in YYYYMMDD format) (*required if SSN is not provided*).

ssn | string (format: xxxxxxxx (include leading zeroes))

The provider's social security number (*required if DOB is not provided*).

gender | string

The practitioner's gender (M or F) (*optional*).

caqhld | string (maxLength 8 8 characters)

The provider's identification number in the CAQH. This value can be used to match the provider in the Verisys system (*optional*).

facilityName | string (maxLength 128 characters)

The name of the facility (*required* for facilities).

facilityType | string (maxLength 50 characters)

The type of facility (i.e., hospital, home health) (*required* for License verifications). The *license type* should be instead of the facility type for license monitoring.

facilityTypeId | integer

The Verisys identifier for the facility type (code provided by Verisys) (*optional*).

facilityTIN | string (maxLength 11 characters)

The facility tax identification number (EIN) (*required* if facilityName is specified) (*conditional; required for DEA profile verifications, NPI profile verifications, OFAC verifications*).

dbaName | string (maxLength 128 characters)

The “doing business as” name (*optional*).

clialdNumber | string (maxLength 15 characters)

The Clinical Laboratory Improvement Amendments identification number for laboratory testing (*optional*).

address | string

The provider/facility street address (*conditional, required for employment history verifications, OFAC Plus verifications, FACIS 1M and 3 verifications for facilities*).

city | string

The city for the provider/facility (*conditional, required for employment history verifications, OFAC Plus verifications, FACIS 1M and 3 verifications for facilities*).

state | string

The state for the provider/facility (*conditional, required for employment history verifications, OFAC Plus verifications, FACIS 1M and 3 verifications for facilities*).

zipCode | string

The zip code for the provider/facility (*conditional, required for employment history verifications, OFAC Plus verifications, FACIS 1M and 3 verifications for facilities*).

emailAddress | string

The provider's email address (*optional*).

specialtyId | string

The Verisys internal code for the provider's specialty (*optional*).

certificationSpecialty | string

The specific practice area in which the provider has training and experience (*required for Board Certifications*).

certificationSubspecialty | string

Additional expertise related to the board certification specialty (*required for Board Certifications*, if available).

certificationIssuingAgency | string

The organization or governing body that issued the professional certification or board certificate (*required for Board Certifications*).

boardCertificationNumber | string

The unique identifier for each certification (*required for Board Certifications*).

boardName | string

The name of the state board issuing the license (*required for Board Certifications*).

cds

state | string

The two-character abbreviation for the state that issued the CDS license (*required for CDS Licenses*).

licenseNumber | string

The CDS license number (*required for CDS Licenses*).

passThroughData | string

Text that is copied directly from one source to another, without any modification or processing (500 characters maximum).

1.2.2. Sample POST Order Response: 201 Created

```
{
  "orderId": 0,
  "externalOrderId": "string",
  "providerId": 0,
  "externalProviderId": "string",
  "provider": "string",
  "client": "string",
  "isComplete": true,
  "status": "string",
  "statusId": 0,
  "statusDescription": "string",
  "startDate": "2023-10-04T17:20:44.011Z",
  "dateCompleted": "2023-10-04T17:20:44.011Z",
  "matchReasons": "string"
```

}

1.2.3. POST Orders Response Parameters: 201 Created

orderId | integer

The unique numeric identifier for the order within the Verisys system.

externalOrderId | string

A unique identifier used to identify or correlate the Profile order.

providerId | integer

The internal Verisys identifier for the provider being verified.

externalProviderId | string

An identifier used to identify the provider in the client's system.

provider | string

The name of the provider for whom Profile data is being retrieved.

client | string

The name of the client for whom the provider data is being retrieved.

isComplete | boolean

If true, the order has been completed and the Profile results are ready for retrieval.

status | string

The status of the verification order.

- **Submitted**—The order has been successfully submitted, but has not yet started processing.
- **In Progress**—The PSV order is currently being processed by the system.
- **Canceled**—The PSV order was canceled during processing.
- **Complete**—The PSV Order is complete and ready for retrieval.
- **Complete – Error**—The PSV Order could not be processed due to an error.
- **Complete – Timeout**—The configured timeout window for the order has expired, and it could not be completed.
- **Submitted – Error**—The order could not be submitted successfully because the provider could not be matched, or due to another internal error.
- **Ongoing Monitoring**—Provider is currently monitored by Verisys.
- **Monitoring Inactive**—Monitoring has been stopped for the given provider.
- **Pending**—Awaiting additional internal processes.

statusId | integer

The numeric identifier of the order's status.

- **1** (Submitted)
- **2** (In Progress)
- **3** (Canceled)
- **4** (Complete)
- **5** (Complete – Error)
- **6** (Complete – Timeout)
- **7** (Submitted – Error)
- **8** (Ongoing Monitoring)
- **9** (Monitoring Inactive)
- **10** (Pending)

statusDescription | string

Text providing additional information about the status. For example, for Complete – Error status, the description provides more information about what caused the exception.

startDate | date-time

The date/time when the order was submitted to Verisys.

dateCompleted | date-time

The date/time when Verisys completed the Profile data retrieval process for the order.

matchReasons | string

Indicates how the provider was found.

1.2.4. Sample POST Order Response: 400 Bad Request

```
{
  "statusCode": 0,
  "errorCode": 0,
  "message": "string",
  "detail": "string"
}
```

1.2.5. POST Orders Response Parameters: 400 Bad Request, 403 Forbidden, 404 Not Found, and 500 Server Error

statusCode | integer

The HTTP response code for the error (e.g., 404, 500).

errorCode | ApiErrorCodeinteger

The enumeration used for Error Code responses.

message | string

A text message that the client can use to render on a control and display to a human user.

detail | string

Additional details to help developers understand the exception.

2. Retrieve the Current Status of a Single Monitoring Order using the GET Order (orderId) Call

The GET Order (orderId) enables you to retrieve the status of a specific monitoring order using the system-generated order identifier.

HTTP Method: GET /orders/{orderId}

Stage URL: <https://apis.verisys.com/profile-orders-stage>

Production URL: <https://apis.verisys.com/profile-orders>

2.1. GET Order (orderId) Query Parameters

orderId | integer

The ID of the order being requested.

2.2. Sample GET Order (orderId) Response

200: Success

```
{
  "orderId": 0,
  "externalOrderId": "string",
  "providerId": 0,
  "externalProviderId": "string",
  "provider": "string",
  "client": "string",
  "isComplete": true,
  "status": "string",
  "statusId": 0,
  "statusDescription": "string",
  "startDate": "2023-10-04T19:06:51.577Z",
  "dateCompleted": "2023-10-04T19:06:51.577Z",
  "matchReasons": "string"
}
```

2.3. GET Order (orderId) Parameters

orderId | integer

The unique numeric identifier for the order within the Verisys system.

externalOrderId | string

A unique identifier used to identify or correlate the Profile order.

providerId | Integer

The internal Verisys identifier for the provider being verified.

externalProviderId | string

An identifier used to identify the provider in the client's system.

provider | string

The name of the provider for whom Profile data is being retrieved.

client | string

The name of the client for whom the provider data is being retrieved.

isComplete | boolean

If true, the order has been completed, and Profile results are ready for retrieval.

status | string

The status of the verification order.

- **Submitted**—The order has been successfully submitted, but has not yet started processing.
- **In Progress**—The PSV order is currently being processed by the system.
- **Canceled**—The PSV order was canceled during processing.
- **Complete**—The PSV Order is complete and ready for retrieval.
- **Complete – Error**—The PSV Order could not be processed due to an error.
- **Complete – Timeout**—The configured timeout window for the order has expired, and it could not be completed.
- **Submitted – Error**—The order could not be submitted successfully because the provider could not be matched, or due to another internal error.
- **Ongoing Monitoring**—Provider is currently monitored by Verisys.
- **Monitoring Inactive**—Monitoring has been stopped for the given provider.
- **Pending**—Awaiting additional internal processes.

statusId | integer

The numeric identifier of the order's status.

- **1** (Submitted)
- **2** (In Progress)
- **3** (Canceled)
- **4** (Complete)
- **5** (Complete – Error)
- **6** (Complete – Timeout)
- **7** (Submitted – Error)

- **8** (Ongoing Monitoring)
- **9** (Monitoring Inactive)
- **10** (Pending)

statusDescription | string

Text providing additional information about the status. For example, for Complete – Error status, the description provides more information about what caused the exception.

startDate | date-time

The date and time the order was submitted to Verisys.

dateCompleted | date-time

The date and time on which Verisys completed the Profile data retrieval process for the order.

matchReasons | string

Indicates how the provider was found.

3. Retrieve the Status for Multiple Monitoring Orders using the GET Orders Call

The GET Orders call enables you to filter and retrieve the status of monitoring orders using a date/time range.

HTTP Method: GET /orders/

Stage URL: <https://apis.verisys.com/profile-orders-stage>

Production URL: <https://apis.verisys.com/profile-orders>

3.1. GET Orders Query Parameters

offset | integer

The query parameter offset sets the first position to return from the query results.
Default value: 0

limit | integer

The number of orders per page. Default value: 10

periodBegin | date-time

The beginning of search window. (*optional*)

periodEnd | date-time

The end of search window. (*optional*)

periodType | string

Specifies the target for the periodBegin and periodEnd parameters.

- 0 - (default) No date filter applied
- 1 - Filter By Start Work Date
- 2 - Filter By Completion Date
- 3 - Filter By Committee Date

statusId | integer

The order status filter. (*optional*)
Default value: 0

3.2. Sample GET Orders Response

200: Success Response

```
[
  {
    "orderId": 0,
    "externalOrderId": "string",
    "providerId": 0,
    "externalProviderId": "string",
    "provider": "string",
    "client": "string",
    "isComplete": true,
    "status": "string",
    "statusId": 0,
    "statusDescription": "string",
    "startDate": "2023-10-04T17:39:41.589Z",
    "dateCompleted": "2023-10-04T17:39:41.589Z",
    "matchReasons": "string"
  }
]
```

3.3. GET Orders Parameters

orderId | integer

The unique numeric identifier for the order within the Verisys system.

externalOrderId | string

A unique identifier used to identify or correlate the Profile order.

providerId | Integer

The internal Verisys identifier for the provider being verified.

externalProviderId | string

An identifier used to identify the provider in the client's system.

provider | string

The name of the provider for whom profile data is being retrieved.

client | string

The name of the client for whom the provider data is being retrieved.

isComplete | boolean

If true, the order has been completed, and Profile results are ready for retrieval.

status | string

The status of the verification order.

- **Submitted**—The order has been successfully submitted, but has not yet started processing.
- **In Progress**—The PSV order is currently being processed by the system.
- **Canceled**—The PSV order was canceled during processing.

- **Complete**—The PSV Order is complete and ready for retrieval.
- **Complete – Error**—The PSV Order could not be processed due to an error.
- **Complete – Timeout**—The configured timeout window for the order has expired, and it could not be completed.
- **Submitted – Error**—The order could not be submitted successfully because the provider could not be matched, or due to another internal error.
- **Ongoing Monitoring**—Provider is currently monitored by Verisys.
- **Monitoring Inactive**—Monitoring has been stopped for the given provider.
- **Pending**—Awaiting additional internal processes.

statusId | integer

The numeric identifier of the order's status.

- **1** (Submitted)
- **2** (In Progress)
- **3** (Canceled)
- **4** (Complete)
- **5** (Complete – Error)
- **6** (Complete – Timeout)
- **7** (Submitted – Error)
- **8** (Ongoing Monitoring)
- **9** (Monitoring Inactive)
- **10** (Pending)

statusDescription | string

Text providing additional information about the status. For example, for Complete – Error status, the description provides more information about what caused the exception.

startDate | date-time

The date and time when the order was submitted to Verisys.

dateCompleted | date-time

The date and time when Verisys completed the Profile data retrieval process for the order.

matchReasons | string

Indicates how the provider was found.

4. Retrieve the Results for a Single Monitoring Order using the GET Result (orderId) Call

The GET Results call enables you to retrieve results for completed monitoring order.

HTTP Method: GET /results/{orderid}

Stage URL: <https://apis.verisys.com/profile-orders-stage>

Production URL: <https://apis.verisys.com/profile-orders>

4.1. GET Result (orderId) Query Parameters

orderId | integer

ID for the requested order.

version | string

The version identifier.

include | array [string]

A list of elements to be included; if not specified, all elements the user has permission to view will be returned. Can submit multiple by repeating in parameter list. Monitoring includes: facis_1m_verified_monitoring, facis_3_verified_monitoring, license_monitoring, npa_monitoring, ssadmf_monitoring, and dea_monitoring.

allowPartialResults | boolean

If true, returns current order results even if the order is not yet complete. If false, incomplete orders return a 404. Defaults to false.

4.2. Sample GET Result (orderId) Response

Note: The GET Result (orderId) Response sample below represents the response for a practitioner. Refer to Appendix C: Sample Monitoring Results for Entities for the entity sample response.

200: Success

4.3. GET Result (orderId) Parameters

orderId | integer

The ID of the order being requested.

externalOrderId | string

A unique identifier used to identify or correlate the Profile order.

providerId | Integer

The internal Verisys identifier for the provider being verified.

externalProviderId | string

An identifier used to identify the provider in the client's system.

matchReasons | string

Indicates how the provider was found.

providerName | string

A rendering of the full name for the provider.

firstName | string

The provider's first name.

middleName | string

The provider's middle name.

lastName | string

The provider's last name.

title | string

The provider's title.

suffix | string

The provider's suffix.

providerType | string

The type of healthcare provider (i.e., MD, DO, etc.).

status | string

The status of the verification order.

- **Submitted**—The order has been successfully submitted, but has not yet started processing.

- **In Progress**—The PSV order is currently being processed by the system.
- **Canceled**—The PSV order was canceled during processing.
- **Complete**—The PSV Order is complete and ready for retrieval.
- **Complete – Error**—The PSV Order could not be processed due to an error.
- **Complete – Timeout**—The configured timeout window for the order has expired, and it could not be completed.
- **Submitted – Error**—The order could not be submitted successfully because the provider could not be matched, or due to another internal error.
- **Ongoing Monitoring**—Provider is currently monitored by Verisys.
- **Monitoring Inactive**—Monitoring has been stopped for the given provider.
- **Pending**—Awaiting additional internal processes.

statusId | integer

The numeric identifier of the order's status.

- **1** (Submitted)
- **2** (In Progress)
- **3** (Canceled)
- **4** (Complete)
- **5** (Complete – Error)
- **6** (Complete – Timeout)
- **7** (Submitted – Error)
- **8** (Ongoing Monitoring)
- **9** (Monitoring Inactive)
- **10** (Pending)

statusDescription | string

Text providing additional information about the status. For example, for Complete – Error status, the description provides more information about what caused the exception.

startDate | date-time

The date and time when the order was submitted to Verisys.

dateCompleted | date-time

The date and time when Verisys completed the Profile data retrieval process for the order.

4.3.1. facis3 and facis1m

subjectId | string

The Verisys internal identifier for the provider with which this element is associated.

externalCode | string

The client's identifier for the provider within their system(s).

dataSourceId | string

The Verisys internal identifier for the data source.

sourceStandingId | interger

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

matchReason | string

Indicates how Verisys found the provider in a Secondary Search. e.g., NPI, DEA-FirstName-LastName, etc.

evidence

documentTypeId | string

The Verisys internal numeric identifier for the document type.

documentTypeDescription | string

A String description of the type of document (e.g. \"Screenshot License\", \"DEA Certificate\", \"NPDB Response\").

revisedDate | string

The date/time the evidence was captured or updated.

evidenceImages

A array of the images of the supporting evidence.

externalImageId | string

A client's external identifier for the document or image (available only if supplied by the client, e.g., in the case when a client submitted an image to Verisys).

sequence | string

The page number of the first page within a multi-page image file to be used as evidence; will be 1 for single image files or multi-page images in which the entire image relates to the data element.

imageUri | string

The full URI path to the image within the Verisys API (via the Image service) - can be used to download the image from Verisys.

hasData | boolean

A flag indicating whether Verisys was able to find data for this element (true) or if it's just a default \"no results\" response (false).

hasFinding | boolean

True if the provider has a sanction and false if we found no sanction.

subjectName | string

The name of the provider or entity with which this element is associated.

verificationResult | string

The result of FACIS 3 monitoring.

resultDate | date-time

The date and time at which results were identified.

monitoredPersonInfo

An object containing the name of the monitored person.

firstName | string

The provider's first name.

middleName | string
The provider's middle name.

lastName | string
The provider's last name.

resultDetails

providerInformation
An object containing details of the sanctioned provider from the primary source.

phones | string
Phone numbers of the sanction provider

aliases | string
Aliases of the sanctioned provider

licenses
An array containing objects with licenses associated with the sanctioned provider according to the primary source.

type | string
The type of license.

state | string
The two-letter code for the state for which the licensed was issued.

number | string
The number of the provider's license as issued by the state.

issueDate | date
The issue date of the license.

expirationDate | date
The expiration date of the license at the time of the sanction publication.

addresses
An array containing objects with addresses associated with the sanctioned provider according to the primary source.

zip | string
The ZIP code associated with the sanctioned provider.

city | string
The city associated with the sanctioned provider.

state | string
The state associated with the sanctioned provider.

address1 | string
The address associated with the sanctioned provider.

lastName | string

The last name of the sanctioned provider according to the primary source.

recordId | string

The record identifier for addresses associated with the sanctioned provider.

resultId | string

The result identifier.

firstName | string

The first name of the sanctioned provider according to the primary source.

middleName | string

The middle name of the sanctioned provider according to the primary source.

sanctionInformation

An object containing details of the sanction.

notes | string

Notes regarding the sanction.

actions

Array containing objects describing the actions of the sanction.

code | string

The identification code of the action if specified by the primary source.

term | string

The term of the action if specified by the primary source.

type | string

The type of the action if specified by the primary source.

endDate | date

The end date of the action if specified by the primary source.

startDate | date

The start date of the action if specified by the primary source.

charges | string

The charges of the sanction if specified by the primary source.

findings

Array containing strings describing the findings of the sanction investigation if specified by the primary source.

entryDate | string

The date on which findings for the sanction investigation were entered by the primary source.

taxonomies

actionSummary | string

The summary of the sanction and the actions taken against the provider.

acquisitionDate | date

The date the information of the sanction was acquired by Verisys.

publicationDate | date

The date the primary source published the sanction.

verificationInformation

Object containing information about the verification of the sanction performed by a Verisys Verification Specialist. (Verified FACIS only)

notes | string

Notes from the Verification specialist concerning the matching process, and primary source data on the day of verification if the sanction is determined to be a match.

result | string

The result of the verification performed by the Verification specialists. Possible values:

- **Federal Match:** Sanction is a match to the monitored provider per Verisys Verification. The sanction source is a federal source.
- **State Match:** Sanction is a match to the monitored provider per Verisys Verification. The sanction source is a federal source.
- **No Match:** Sanction is not a match to the monitored provider per Verisys Verification.
- **Unable to Determine:** Verisys Verification is unable to determine if sanction is a match.
- **UTD Additional Information Required:** Verisys Verification unable to determine if sanction is a match. Additional information about the monitored person is required to make determination.

resultBucket | string

Identifier for the verification result.

- **0**—No Match.
- **1**—Active Federal Exclusions.
- **2**—Active State Level Exclusion or Debarment.
- **3**—Active License Suspension, Revocation or Similar.
- **4**—Active License probation, restriction or similar.
- **5**—Historical Exclusions (any type) or Licensure Actions (any type), Historical

- **6**—Historical Exclusions (any type) or Licensure Actions (any type), Historical
- **7**—Non disciplinary events.
- **8**—Unable to determine if event matches provider.

verificationId | string

The unique identifier for the verification.

publicationInformation

An object containing details of the sanction.

name | string

The name of sanction publication.

authority | string

The agency issuing the sanction.

jurisdiction | string

The country, territory or geographical region associated with the sanction.

publishedDate | date

The date the primary source published the sanction.

referenceFile | string

Path for the reference file for the sanction. Reference file is only available for Verified FACIS and if the sanction is ruled a match by the Verisys Verification Specialist. Value can be submitted to /images endpoint to retrieve PDF image.

4.3.2. stateLicenses

subjectName | string

The name of the provider or entity with which this element is associated.

subjectId | string

The Verisys internal identifier for the provider with which this element is associated.

externalCode | string

The client's identifier for the provider within their system(s).

dataSourceId | string

The Verisys internal identifier for the data source.

sourceStandingId | interger

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

matchReason | string

Indicates how Verisys found the provider in a Secondary Search. e.g., NPI, DEA-FirstName-LastName, etc.

*evidence***documentTypeId** | string

The Verisys internal numeric identifier for the document type.

documentTypeDescription | string

A String description of the type of document (e.g. \"Screenshot License\", \"DEA Certificate\", \"NPDB Response\").

revisedDate | date-time

The date/time the evidence was captured or updated.

evidenceImages

A array of the images of the supporting evidence.

externalImageId | string

A client's external identifier for the document or image (available only if supplied by the client, e.g., in the case when a client submitted an image to Verisys).

sequence | string

The page number of the first page within a multi-page image file to be used as evidence; will be 1 for single image files or multi-page images in which the entire image relates to the data element.

imageUri | string

The full URI path to the image within the Verisys API (via the Image service) - can be used to download the image from Verisys.

hasData | boolean

A flag indicating whether we were able to find data for this element (true) or if it's just a default \"no results\" response (false).

boardName | string

The name of the state board issuing the license.

state | string

The two-letter code for the state for which the licensed was issued.

licenseNumber | string

The number of the provider's license as issued by the state.

licenseStatusMapped | string

The license statuses mapped in the Verisys system.

- A
- I
- Active
- Impaired
- Inactive (an expired license)
- License Not Found
- Not Regulated
- Pending
- Probation
- Restricted
- Revoked
- Suspended
- Temporary
- Superseded
- Unknown

Note: For license validations the only possible values for license status mapped are A and I; however, the statuses listed above are possible for verifications and monitoring.

expirationDate | date-time

The date the license expires.

effectiveDate | date-time

The date the license was issued/became effective.

verificationResult | string

The result of the license verification when verification is requested.

resultDetails

notes | string

Notes regarding the license verification.

status | string

The result of the license verification when verification is requested.

issueDate | string

The date on which the license was issued.

licenseState | string

The state in which the license was issued.

licenseNumber | string

The license identification number.

expirationDate | date

The date on which the license expires.

licenseAuthority | string

The agency issuing the sanction.

4.3.3. npf

subjectName | string

The name of the provider or entity with which this element is associated.

subjectId | string

The Verisys internal identifier for the provider with which this element is associated.

externalCode | string

The client's identifier for the provider within their system(s).

dataSourceId | string

The Verisys internal identifier for the data source.

sourceStandingId | integer

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

matchReason | string

Indicates how Verisys found the provider in a Secondary Search. e.g., NPI, DEA-FirstName-LastName, etc.

*evidence***documentTypeId** | string

The Verisys internal numeric identifier for the document type.

documentTypeDescription | string

A String description of the type of document (e.g. \"Screenshot License\", \"DEA Certificate\", \"NPDB Response\").

revisedDate | date-time

The date/time the evidence was captured or updated.

evidenceImages

A array of the images of the supporting evidence.

externalImageId | string

A client's external identifier for the document or image (available only if supplied by the client, e.g., in the case when a client submitted an image to Verisys).

sequence | string

The page number of the first page within a multi-page image file to be used as evidence; will be 1 for single image files or multi-page images in which the entire image relates to the data element.

imageUri | string

The full URI path to the image within the Verisys API (via the Image service) - can be used to download the image from Verisys.

hasData | boolean

A flag indicating whether Verisys was able to find data for this element (true) or if it's just a default \"no results\" response (false).

npiNumber | string

The provider's National Provider Identifier (NPI) number used to match the provider in the Verisys system.

entityTypeCode | interger

Specifies whether the entity type is:

- 1 - Practitioner
- 2 – Facility/Organization

enumerationDate | date-time

The date and time on which the NPI was assigned.

deactivationDate | date-time

The date and time on which the NPI was deactivated for the provider.

lastUpdate | date-time

The date and time on which the NPI database was last updated.

taxonomyCodeList | string

An array of the provider's taxonomy codes. The primary taxonomy code appears first in the list.

facilityName | string

The name of the facility.

legalBusinessName | string

The legal name for the facility.

otherFacilityName | string

The other name for the facility.

otherFacilityNameType | string

A value determined by National Plan and Provider Enumeration System (NPPES).

4.3.4. ssadmf

resultType | string

Indicates the type of result identified as part of the monitoring process.

resultDate | date-time

The date and time at which results were identified.

verificationResult | string

The result of SSADMF monitoring.

hasFinding | string

True if the provider appears on the SSADMF.

sourceStandingId | interger

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

hasData | boolean

A flag indicating whether we were able to find data for this element (true) or if it's just a default \"no results\" response (false).

sourceRecordId | string

The record identifier for the source.

subjectName | string

The name of the provider or entity with which this element is associated.

4.3.5. dea

subjectName | string

The name of the provider or entity with which this element is associated.

subjectId | string

The Verisys internal identifier for the provider with which this element is associated.

externalCode | string

The client's identifier for the provider within their system(s).

dataSourceId | string

The Verisys internal identifier for the data source.

sourceStandingId | interger

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

matchReason | string

Indicates how Verisys found the provider in a Secondary Search. e.g., NPI, DEA-FirstName-LastName, etc.

*evidence***documentTypeId** | string

The Verisys internal numeric identifier for the document type.

documentTypeDescription | string

A String description of the type of document (e.g. \"Screenshot License\", \"DEA Certificate\", \"NPDB Response\").

revisedDate | date-time

The date/time the evidence was captured or updated.

evidenceImages

A array of the images of the supporting evidence.

externalImageId | string

A client's external identifier for the document or image (available only if supplied by the client, e.g., in the case when a client submitted an image to Verisys).

sequence | string

The page number of the first page within a multi-page image file to be used as evidence; will be 1 for single image files or multi-page images in which the entire image relates to the data element.

imageUri | string

The full URI path to the image within the Verisys API (via the Image service) - can be used to download the image from Verisys.

hasData | boolean

A flag indicating whether Verisys was able to find data for this element (true) or if it's just a default \"no results\" response (false).

state | string

The two-letter code for the state for which the license was issued.

certificateNumber | string

The DEA certificate number.

statusCode | string

The status of the DEA certificate: A=Active, I=Inactive

expirationDate | date-time

The date the license expires.

scheduleString | string

A list of the schedules the provider is approved for.

schedule1 | string

The provider handles schedule 1 substances.

schedule2 | string

The provider handles schedule 2 substances.

schedule2n | string

The provider handles schedule 2n substances.

schedule3 | string

The provider handles schedule 3 substances.

schedule3n | string

The provider handles schedule 3n substances.

schedule4 | string

The provider handles schedule 4 substances.

schedule5 | string

The provider handles schedule 5 substances.

issuedBy | string

The name of the entity issuing the DEA license.

dataComment | string

Additional information about the record.

4.3.6. boardCertifications

subjectName | string

The name of the provider or entity with which this element is associated.

subjectId | string

The Verisys internal identifier for the provider with which this element is associated.

externalCode | string

The client's identifier for the provider within their system(s).

dataSourceId | string

The Verisys internal identifier for the data source.

sourceStandingId | interger

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

matchReason | string

Indicates how Verisys found the provider in a Secondary Search. e.g., NPI, DEA-FirstName-LastName, etc.

*evidence***documentTypeId** | string

The Verisys internal numeric identifier for the document type.

documentTypeDescription | string

A String description of the type of document (e.g. \"Screenshot License\", \"DEA Certificate\", \"NPDB Response\").

revisedDate | date-time

The date/time the evidence was captured or updated.

evidenceImages

A array of the images of the supporting evidence.

externalImageId | string

A client's external identifier for the document or image (available only if supplied by the client, e.g., in the case when a client submitted an image to Verisys).

sequence | string

The page number of the first page within a multi-page image file to be used as evidence; will be 1 for single image files or multi-page images in which the entire image relates to the data element.

imageUri | string

The full URI path to the image within the Verisys API (via the Image service) - can be used to download the image from Verisys.

hasData | boolean

A flag indicating whether Verisys was able to find data for this element (true) or if it's just a default \"no results\" response (false).

issuerId | string

The Verisys internal identifier for the issuing entity associated with the board.

issuerName | string

The name of the specialty board issuing the certification.

issuerAuthority | string

The authority that issued the certification.

accreditingAgency | string

The third party that approved the certification.

eligibleStatus | string

Indicates whether the provider has received full certification from the board.

specialtyId | Integer

The Verisys internal code for the provider's specialty.

specialty | string

A string representation of the provider's specialty.

isCertified | string

Indicates whether the provider is board-certified for this specialty.

certificateNumber | string

The certificate number issued by the board (if available).

verificationNotes | string

Any notes/comments related to the board certification.

moc | string

The ongoing maintenance of certification for the provider.

lifetime | string

Indicates whether the provider has a lifetime certification.

originalEffectiveDate | string

The original date of the certification.

expirationDate | date-time

The expiration date for the board certification.

effectiveDate | date-time

The start date for the board certification.

boardTakenDate | date-time

The date on which the board exam was taken.

boardScheduledDate | date-time

The date on which the board exam was scheduled.

lastRecredentialDate | date-time

The date on which recredentialing occurred.

dataComment | string

Comments related to the board certification.

verificationResult | string

The result of the board certification verifications.

4.3.7. facis3Search

subjectId | string

The Verisys internal identifier for the provider with which this element is associated.

externalCode | string

The client's identifier for the provider within their system(s).

dataSourceId | string

The Verisys internal identifier for the data source.

sourceStandingId | interger

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

matchReason | string

Indicates how Verisys found the provider in a Secondary Search. e.g., NPI, DEA-FirstName-LastName, etc.

evidence

documentTypeId | string

The Verisys internal numeric identifier for the document type.

documentTypeDescription | string

A String description of the type of document (e.g. \"Screenshot License\", \"DEA Certificate\", \"NPDB Response\").

revisedDate | date-time

The date/time the evidence was captured or updated.

evidenceImages

A array of the images of the supporting evidence.

externalImageId | string

A client's external identifier for the document or image (available only if supplied by the client, e.g., in the case when a client submitted an image to Verisys).

sequence | string

The page number of the first page within a multi-page image file to be used as evidence; will be 1 for single image files or multi-page images in which the entire image relates to the data element.

imageUri | string

The full URI path to the image within the Verisys API (via the Image service) - can be used to download the image from Verisys.

hasData | boolean

A flag indicating whether Verisys was able to find data for this element (true) or if it's just a default \"no results\" response (false).

hasFinding | boolean

True if the provider has a sanction and false if we found no sanction.

subjectName | string

The name of the provider or entity with which this element is associated.

verificationResult | string

The result of FACIS monitoring. (Verified FACIS only)

resultDate | date-time

The date and time at which results were identified.

monitoredPersonInfo

An object containing the name of the individual being monitored.

firstName | string

The provider's first name.

middleName | string

The provider's middle name.

lastName | string

The provider's last name.

resultDetails

An array containing objects for each monitoring verification result.

providerInformation

An object containing details of the sanctioned provider from the primary source.

phones | string

Phone numbers of the sanction provider

aliases | string

Aliases of the sanctioned provider

licenses

An array containing objects with licenses associated with the sanctioned provider according to the primary source.

type | string

The type of license.

state | string

The two-letter code for the state for which the licensed was issued.

number | string

The number of the provider's license as issued by the state.

issueDate | date

The issue date of the license

expirationDate | date

The expiration date of the license at the time of the sanction publication.

addresses

An array containing objects with addresses associated with the sanctioned provider according to the primary source.

zip | string

The ZIP code associated with the sanctioned provider.

city | string

The city associated with the sanctioned provider.

state | string

The state associated with the sanctioned provider.

address1 | string

The address associated with the sanctioned provider.

lastName | string

The last name of the sanctioned provider according to the primary source.

recordId | string

The record identifier for addresses associated with the sanctioned provider.

resultId | string

The result identifier.

firstName | string

The first name of the sanctioned provider according to the primary source.

middleName | string

The middle name of the sanctioned provider according to the primary source.

sanctionInformation

An object containing details of the sanction.

notes | string

Notes regarding the sanction.

actions

Array containing objects describing the actions of the sanction.

code | string

The code of the action if specified by the primary source.

term | string

The term of the action if specified by the primary source.

type | string

The type of the action if specified by the primary source.

endDate | string

The end date of the action if specified by the primary source.

startDate | string

The start date of the action if specified by the primary source.

charges | string

The charges of the sanction if specified by the primary source.

findings

Array containing strings describing the findings of the sanction investigation if specified by the primary source.

entryDate | string

The date on which findings for the sanction investigation were entered by the primary source.

taxonomies

actionSummary | string

The summary of the sanction and the actions taken against the provider.

acquisitionDate | date

The date the information of the sanction was acquired by Verisys.

publicationDate | date

The date the primary source published the sanction.

verificationInformation

Object containing information about the verification of the sanction performed by a Verisys Verification Specialist. (Verified FACIS only)

notes | string

Notes from the Verification specialist concerning the matching process, and primary source data on the day of verification if the sanction is determined to be a match.

result | string

The result of the verification performed by the Verification specialists. Possible values:

- **Federal Match:** Sanction is a match to the monitored provider per Verisys Verification. The sanction source is a federal source.
- **State Match:** Sanction is a match to the monitored provider per Verisys Verification. The sanction source is a federal source.
- **No Match:** Sanction is not a match to the monitored provider per Verisys Verification.
- **Unable to Determine:** Verisys Verification is unable to determine if sanction is a match.
- **UTD Additional Information Required:** Verisys Verification unable to determine if sanction is a match. Additional information about the monitored person is required to make determination.

resultBucket | string

Identifier for the verification result.

- **0**—No Match
- **1**—Active Federal Exclusions
- **2**—Active State Level Exclusion or Debarment
- **3**—Active License Suspension, Revocation or Similar
- **4**—Active License probation, restriction or similar
- **5**—Historical Exclusions (any type) or Licensure Actions (any type), Historical
- **6**—Historical Exclusions (any type) or Licensure Actions (any type), Historical
- **7**—Non disciplinary events
- **8**—Unable to determine if event matches provider

verificationId | string

The unique identifier for the verification.

publicationInformation

An object containing details of the sanction.

name | string

The name of sanction publication.

authority | string

The agency issuing the sanction.

jurisdiction | string

The country, territory or geographical region associated with the sanction.

publishedDate | date

The date the primary source published the sanction.

referenceFile | string

Path for the reference file for the sanction. Reference file is only available for Verified FACIS and if the sanction is ruled a match by the Verisys Verification Specialist. Value can be submitted to /images endpoint to retrieve PDF image.

4.3.8. facis1mSearch

subjectId | string

The Verisys internal identifier for the provider with which this element is associated.

externalCode | string

The client's identifier for the provider within their system(s).

dataSourceId | string

The Verisys internal identifier for the data source.

sourceStandingId | interger

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

matchReason | string

Indicates how Verisys found the provider in a Secondary Search. e.g., NPI, DEA-FirstName-LastName, etc.

*evidence***documentTypeId** | string

The Verisys internal numeric identifier for the document type.

documentTypeDescription | string

A String description of the type of document (e.g. \"Screenshot License\", \"DEA Certificate\", \"NPDB Response\").

revisedDate | date-time

The date/time the evidence was captured or updated.

evidenceImages

A array of the images of the supporting evidence.

externalImageId | string

A client's external identifier for the document or image (available only if supplied by the client, e.g., in the case when a client submitted an image to Verisys).

sequence | string

The page number of the first page within a multi-page image file to be used as evidence; will be 1 for single image files or multi-page images in which the entire image relates to the data element.

imageUri | string

The full URI path to the image within the Verisys API (via the Image service) - can be used to download the image from Verisys.

hasData | boolean

A flag indicating whether Verisys was able to find data for this element (true) or if it's just a default \"no results\" response (false).

hasFinding | boolean

True if the provider has a sanction and false if we found no sanction.

subjectName | string

The name of the provider or entity with which this element is associated.

verificationResult | string

The result of FACIS monitoring. (Verified FACIS only)

monitoredPersonInfo

An object containing the name of the individual being monitored.

firstName | string

The provider's first name.

middleName | string

The provider's middle name.

lastName | string

The provider's last name.

resultDetails

An array containing objects for each monitoring verification result.

providerInformation

An object containing details of the sanctioned provider from the primary source.

phones | string

Phone numbers of the sanction provider

aliases | string

Aliases of the sanctioned provider

licenses

An array containing objects with licenses associated with the sanctioned provider according to the primary source.

type | string

The type of license.

state | string

The two-letter code for the state for which the licensed was issued.

number | string

The number of the provider's license as issued by the state.

issueDate | date

The issue date of the license

expirationDate | date

The expiration date of the license at the time of the sanction publication.

addresses

An array containing objects with addresses associated with the sanctioned provider according to the primary source.

zip | string

The ZIP code associated with the sanctioned provider.

city | string

The city associated with the sanctioned provider.

state | string

The state associated with the sanctioned provider.

address1 | string

The address associated with the sanctioned provider.

lastName | string

The last name of the sanctioned provider according to the primary source.

recordId | string

The record identifier for addresses associated with the sanctioned provider.

resultId | string

The result identifier.

firstName | string

The first name of the sanctioned provider according to the primary source.

middleName | string

The middle name of the sanctioned provider according to the primary source.

sanctionInformation

An object containing details of the sanction.

notes | string

Notes regarding the sanction.

actions

Array containing objects describing the actions of the sanction.

Code | string

The code of the action if specified by the primary source.

term | string

The term of the action if specified by the primary source.

type | string

The type of the action if specified by the primary source.

endDate | string

The end date of the action if specified by the primary source.

startDate | string

The start date of the action if specified by the primary source.

charges | string

The charges of the sanction if specified by the primary source.

findings

Array containing strings describing the findings of the sanction investigation if specified by the primary source.

entryDate | string

The date on which findings for the sanction investigation were entered by the primary source.

*taxonomies***actionSummary** | string

The summary of the sanction and the actions taken against the provider.

acquisitionDate | date

The date the information of the sanction was acquired by Verisys.

publicationDate | date

The date the primary source published the sanction.

verificationInformation

Object containing information about the verification of the sanction performed by a Verisys Verification Specialist. (Verified FACIS only)

notes | string

Notes from the Verification specialist concerning the matching process, and primary source data on the day of verification if the sanction is determined to be a match.

result | string

The result of the verification performed by the Verification specialists. Possible values:

- **Federal Match:** Sanction is a match to the monitored provider per Verisys Verification. The sanction source is a federal source.
- **State Match:** Sanction is a match to the monitored provider per Verisys Verification. The sanction source is a federal source.
- **No Match:** Sanction is not a match to the monitored provider per Verisys Verification.
- **Unable to Determine:** Verisys Verification is unable to determine if sanction is a match.
- **UTD Additional Information Required:** Verisys Verification unable to determine if sanction is a match. Additional information about the monitored person is required to make determination.

referenceDoc | string

The reference document.

resultBucket | string

Identifier for the verification result.

- **0**—No Match
- **1**—Active Federal Exclusions
- **2**—Active State Level Exclusion or Debarment
- **3**—Active License Suspension, Revocation or Similar
- **4**—Active License probation, restriction or similar
- **5**—Historical Exclusions (any type) or Licensure Actions (any type), Historical
- **6**—Historical Exclusions (any type) or Licensure Actions (any type), Historical
- **7**—Non disciplinary events
- **8**—Unable to determine if event matches provider

verificationId | string

The unique identifier for the verification.

publicationInformation

An object containing details of the sanction.

name | string

The name of sanction publication.

authority | string

The agency issuing the sanction.

jurisdiction | string

The country, territory or geographical region associated with the sanction.

publishedDate | date

The date the primary source published the sanction.

referenceFile | string

Path for the reference file for the sanction. Reference file is only available for Verified FACIS and if the sanction is ruled a match by the Verisys Verification Specialist. Value can be submitted to /images endpoint to retrieve PDF image.

4.3.9. cms

subjectName | string

The name of the provider or entity with which this element is associated.

subjectId | 0

The Verisys internal identifier for the provider with which this element is associated.

externalCode | string

The client's identifier for the provider within their system(s).

dataSourceId | string

The Verisys internal identifier for the data source.

providerFirstName | string

The provider's first name.

providerMiddleName | string

The provider's middle name.

providerLastName | string

The provider's last name.

verificationComment | string

Comments related to the verification.

sourceStandingId | integer

An integer identifier for the standing (status) of the element within the primary source.

sourceStanding | string

A string representation of the standing (status) of the element within the primary source.

source | string

The name of the primary source from which the information was retrieved.

sourceVersionDate | date-time

The date the primary source data was generated by the issuer/supplier.

sourceStandingComment | string

A comment with more information about the standing of the data in the source.

sourceRefreshDate | date-time

The date on which the source data was loaded into the Verisys system. This value may not be the same date as the source version date.

retrievedBy | string

The user or system process that retrieved the element from the source.

isPrimarySource | boolean

Indicates whether the information is from a primary source (vs. a secondary or derived source).

matchReason | string

Indicates how Verisys found the provider in a Secondary Search. e.g., NPI, DEA-FirstName-LastName, etc.

evidence

documentTypeId | string

The Verisys internal numeric identifier for the document type.

documentTypeDescription | string

A String description of the type of document (e.g. \"Screenshot License\", \"DEA Certificate\", \"NPDB Response\").

revisedDate | date-time

The date/time the evidence was captured or updated.

*evidenceImages***externalImageId** | string

A client's external identifier for the document or image (available only if supplied by the client, e.g., in the case when a client submitted an image to Verisys).

sequence | 0

The page number of the first page within a multi-page image file to be used as evidence; will be 1 for single image files or multi-page images in which the entire image relates to the data element.

imageUri | string

The full URI path to the image within the Verisys API (via the Image service) - can be used to download the image from Verisys.

hasData | true

A flag indicating whether Verisys was able to find data for this element (true) or if it's just a default \"no results\" response (false).

verifiedStatus | string

The status of the verification.

resultId | string

The identifier for the verification result.

isReviewed | true

Indicates whether the verification has been reviewed.

reviewedBy | string

Indicates who reviewed the verification.

userId | string

The system identifier for the user.

reviewNote | string

Reviewer notes.

sourceRecordId | string

The record identifier for the source.

actionType | string

The type of action to be performed on a record, such as adding, deleting, or updating information.

reinstatementDate | date-time

The date on which the provider/facility is reinstated.

waiverEffectiveDate | date-time

The date on which a waiver took effect for the provider/facility.

waiverEndDate | date-time

The date on which a waiver ends for the provider/facility.

waiverNotes | string

Notes related to the waiver.

5. Halt the Monitoring Process using the Stop Monitoring Requests Call

The Stop Monitoring call enables you to cancel the monitoring order request by entering the system-generated order ID created as part of the monitoring request.

HTTP Method: POST /orders/{orderId}/stop-monitoring

Stage URL: <https://apis.verisys.com/profile-orders-stage>

Production URL: <https://apis.verisys.com/profile-orders>

5.1. Path Parameters

No post body needed; the parameter is in the path.

5.2. Sample Stop Monitoring Request Response

200: Success

A successful response contains requested evidence image data.

400: Bad Request

Cannot parse request, incorrect syntax, or invalid schema.

403: Forbidden

Authentication failure, user doesn't have access to the resource. Typically masked as an HTTP 400 response due to IRM policy.

404: Not Found

Resource does not exist.

500: Server Error

General server problem.

Appendices

Appendix A: Webhook for Order Status Notifications

Create a Webhook for Order Status Notifications

Verisys Unified APIs can push notifications for order status updates to a client-specified webhook or API URL. Clients must expose a URL where Verisys can obtain an OAuth authorization token and a URL where Verisys can send the notification using the token received from the token URL. Below are instructions on what Verisys expects when clients use the notification service.

OAuth Token Authentication for Order Status Notifications

The Verisys Unified API notification service uses a basic OAuth pattern to ensure security when pushing order updates. Verisys will not send notifications to endpoints with no authentication process.

The requirements for the token authentication process are as follows:

1. The client provides Verisys with:
 - An authentication token URL.
 - A client ID and a client secret.
2. Verisys will POST the following to the authentication URL with an x-www-form-urlencoded content type.

Note: Clients should not require any other parameters in order for Verisys to obtain the auth token.

a. `grant_type: client_credentials`

3. The client token endpoint should return the following:

```
{
  access_token: string, // Required
  expires_in: int, // In Seconds. Required if not encoded in JWT access_token
  with "ValidTo"
}
```

- Verisys will POST the acquired token as a Bearer token along with the webhook payload to the URL specified by the client to receive notifications.

Sample JSON

```

  ]
}
```

Parameters

orderId | integer

The unique numeric identifier for the order within the Verisys system.

externalOrderId | string

A unique identifier used to identify or correlate the credentialing order.

externalProviderId | string

An identifier used to identify the provider in the client's system.

providerName | string

For provider cred, the name of the provider for whom the credentialing data is being retrieved.

facilityName | string

For facility cred, the name of the facility for whom the credentialing data is being retrieved.

facilityDbName | string

For facility cred, the DBA name of the facility for whom the credentialing data is being retrieved.

billingClientID | integer

The billing client ID of the client for whom the provider data is being retrieved.

status | string

The status of the verification order.

- **Submitted**—The order has been successfully submitted, but has not yet started processing.
- **In Progress**—The PSV order is currently being processed by the system.
- **Canceled**—The PSV order was canceled during processing.
- **Complete**—The PSV Order is complete and ready for retrieval.
- **Complete – Error**—The PSV Order could not be processed due to an error.
- **Complete – Timeout**—The configured timeout window for the order has expired, and it could not be completed.
- **Submitted – Error**—The order could not be submitted successfully because the provider could not be matched, or due to another internal error.
- **Ongoing Monitoring**—Provider is currently monitored by Verisys.
- **Monitoring Inactive**—Monitoring has been stopped for the given provider.
- **Pending**—Awaiting additional internal processes.

statusDescription | string

Text providing additional information about the status. Status values and descriptions include:

- **Request Received**—Updates when Order ID is returned to the UAPI system.
- **Order Initiated**—Request has begun processing in the workflow.
- **Waiting Application**—Awaiting application data.
- **Waiting Application Outreach Response**—Awaiting application data where Verisys outreaches to the provider.
- **PSV Application Under Review**—The application was received and is currently being verified for accuracy and completeness.

- **QA Review**—Primary Source Verifications Complete, doing a final review of verifications for accuracy before completing.
- **PSV Complete - Provider Not Participating**—The provider did not/could not participate (moved, retired, deceased), and no verifications occurred.
- **PSV Order Closed application not received**—The provider did not submit application and no verifications occurred.
- **PSV Cancelled**—The client requested Verisys cancel the work.
- **PSV Complete - Missing Data Unable to Verify**—Provider submitted an incomplete application, was unresponsive to outreaches for the missing data, and Verisys was unable to complete all requested verifications.
- **PSV Complete**—Primary Source Verifications Completed request complete.
- **Outreach to Provider During PSV**—PSV started, and we are missing data, performing re-outreach.
- **Committee Review**—Committee Review.
- **Committee Complete**—Committee review completed, and a decision has been made.

UpdateDate | date-time

The date and time the order was last updated by Verisys.

orderTaskStatus (array)

Contains a list of credentialing order tasks, their statuses and subtasks.

orderTask | string

The name of the order task.

orderTaskID | integer

The ID number of the order task.

orderTaskStatus | string

The status of the order task.

orderTaskStatusDescription | string

Description of the order task status.

UpdateDate | date-time

The date and time the order task was last updated by Verisys.

documents (array)

Contains a list of credentialing order sub tasks and their statuses.

documentId | integer

The ID for the document generated by Verisys.

documentName | string

Customer provided name for the uploaded document.

uploadDate | date-time

The date and time the document was uploaded.

orderSubTaskStatus (array)

Contains a list of credentialing order sub tasks and their statuses.

orderSubTask | string

The name of the order sub task.

orderSubTaskID | integer

The ID number of the order sub task.

orderSubTaskStatus | string

The status of the order sub task.

orderSubTaskStatusDescription | string

Description of the order sub task status.

UpdateDate | date-time

The date and time the order sub task was last updated by Verisys.

Appendix B: Valid Values for Board Certifications

boardName

The following values are valid for the boardName attribute:

- American Board of Otolaryngology
- American Board of Colon and Rectal Surgery
- American Board of Orthopaedic Surgery
- American Board of Physical Medicine and Rehabilitation
- American Board of Neurological Surgery
- American Board of Dermatology
- American Board of Family Medicine
- American Board of Nuclear Medicine
- American Board of Ophthalmology
- American Board of Preventive Medicine
- American Board of Urology
- American Board of Allergy and Immunology
- American Board of Anesthesiology
- American Board of Obstetrics and Gynecology
- American Board of Pathology
- American Board of Pediatrics
- American Board of Radiology
- American Board of Surgery
- American Board of Thoracic Surgery
- American Board of Emergency Medicine
- American Board of Internal Medicine
- American Board of Medical Genetics
- American Board of Plastic Surgery
- American Board of Psychiatry and Neurology

certificationSpecialty

The following values are valid for the certificationSpecialty attribute:

- Addiction Medicine
- Addiction Psychiatry
- Adolescent Medicine
- Adult Congenital Heart Disease
- Advanced Heart Failure and Tra
- Aerospace Medicine
- Allergy & Immunology
- Anatomic Pathology
- Anatomic Pathology & Clinical
- Anesthesiology
